Browser errors

Browser errors may occur when opening a web page on kunet.ku.dk.

This guide contains two guidelines, each of which can be used to solve this problem.

• **Guide 1**: Use of the incognito/ Private/ InPrivate function in order to be able to open the desired page in a clean browser without history and cookies.

The advantage of using the incognito/ Private/ InPrivate function is that you do not clear your browser for saved web pages, etc.

• **Guide 2**: Clear browser cache. This means that you clear the browser for history and cookies.

1. When you experience problems with your browser, you will typically get an empty screen or an error message, such as the one shown here.

Other types of error messages may arise, eg. when you access your KUmail, digital exam, self-service on kunet.ku.dk or other pages that fail.

**Guide 1**

2. To solve the problem with the browser, you can use the function that, depending on the browser, is called incognition/ Private/ InPrivate.

**NB!** When you have gone to Incognito/ Private/ InPrivate mode, you must log on to kunet.ku.dk and then access the page you want.

In the following, you can
see how to find different browsers’ incognito/Private/InPrivate function:

3. **Internet Explorer:**
   Click on the gear-ikon in top right corner, click **Security (Sikkerhed)** and **InPrivate browsing**.

![Image of Internet Explorer settings]

4. **Fire Fox:**
   Press the square with three lines in the upper right corner and then click **New Private Window**.
